Speed maps are based on an aggregation of data transmission speeds gathered from a sampling of consumers volunteering to utilize online speed testing tools. Download and upload speeds can be affected by network congestion along the entire path of the test, shared connections at the end user's location, and/or potential hardware limitations on the tested computer. Speed maps are not a depiction of broadband availability or adoption, nor are they necessarily an indicator of the available bandwidth within a given geographic area.

Average residential download speed estimate from speed tests taken between May 1, 2010 and April 30, 2012.
